

## Innovations at RCF/RBL

The main factory structures are fabricated **Kirby** design I-section, low weight, high strength columns. Natural light has been introduced through **poly carbonate panels** and air circulation has been achieved through **self driven turbo exhausters** and **louvres**. The cladding consists of **galvalume sheets with poly urethane foam insulation sandwiched in between**. The temporary housing had been constructed with similar panels which will finally be shifted to serve for constructing service buildings in township. **Piped day light** has been planned for use in the Carpentry & Train Lighting Shops and General Stores.

Cool Daylight
